4:2 Exhibit Lighting Relamping Schedule Form

Exhibit Conservation Guidelines

The Maintenance Manual should include a schedule for relamping the exhibit lighting systems and for replacing any specialized filters.

Documentation of the lighting systems, lamp types and any filters or other special lighting features is critical to the maintenance of conservation approved lighting for the exhibit. The angle and spread of the beam are two very important variables that are often implemented incorrectly during relamping. This effects not only the aesthetics of the exhibit but light levels falling on the display objects.

The following form is an example that can be adapted to suit the particular lighting system used in an exhibit.

EXHIBITION LIGHTING SCHEDULE FORM

Dates of Hispections.									
LAMP TYPE	MANUFACTURER	PART NO.	WATTS	VOLTS	LAMP	QUANTITY	OBJECT OR LOCATION	LIGHT LEVEL	BEAM ANGLE
